

Course Title: VTPMD 6640 - Introduction to Epidemiology

Credit Hours: 3 Hours

Semester: Fall/2021

Class location: S1-132 Schurman Hall (Zoom as needed)

Class meeting times:

Lecture: T, R: 12:00 pm – 12:50 pm

Laboratory: T, R: 1:05 pm – 1:55 pm

Grading: Letter grade

Instructor: Dr. Renata Ivanek-Miojevic
E-mail: ri25@cornell.edu
Office: S1-026 Schurman Hall
Cell phone: 607-216-2716

Office hours: After class or by appointment

Teaching Assistant: Sebastian Llanos Soto
sql67@cornell.edu

I. Rationale:

Course covers fundamental epidemiology concepts and methods in the investigation of determinants of health or disease in populations. Topics include causation, measures of disease frequency and association, sampling methods, selection and interpretation of diagnostic tests, type and characteristics of observational and controlled studies, and bias and confounding.

II. Course Aims and Outcomes:

Aims: The goal of this course is to introduce students to epidemiology concepts and methods used in the investigation of determinants of health or disease in populations; stressing basic methods for experimental design, conduct and analysis of both observational and experimental epidemiologic studies and their critical appraisal. Examples of epidemiological studies in human and animal populations will be discussed. Co-requisite: BTRY 6010 (College of Agriculture and Life Sciences) or permission of instructor.

Specific Learning Outcomes: At the end of the course, students should be able to (i) Identify, calculate and explain common measures of disease frequency and association; (ii) Describe the major types of sampling strategies and calculate appropriate sample sizes; (iii) Describe the major types of observational study designs and justify the choice of an observational study design for answering a research question; (iv) Describe the characteristics of a well-designed randomized controlled trial; (v) Demonstrate understanding of diagnostic and screening test characteristics, including sensitivity, specificity, and predictive values; and (vi) List and explain the major types of bias affecting epidemiological studies and how to control them. In terms of the acquired public health competences students will be expected to be able to interpret data analysis, analyze quantitative data, apply epidemiological methods appropriate for population-based inquiry, design a population-based research project, chose appropriate strategies for communicating epidemiology to novice audience, and use epidemiology to describe and assess a population's health.

III. Format, Requirements and Grading:

Format: This is an intensive introductory level graduate course in Epidemiology concepts and methods. The course will be delivered through lectures and laboratory classes. As part of the learning process, students may score homework and prelims of fellow students. Attendance to lectures and laboratories is expected.

Required text: Ian Dohoo et al., Veterinary Epidemiologic Research (VER Inc. Charlottetown, Prince Edward Island, Canada, 2010).

Course requirements: Access to Canvas and Internet are required. Canvas is a web-based course management system that aids management of course materials, assignments, communications, and other aspects of instruction. It will be your responsibility to check this site regularly for course related

announcements. **Students will be required to use their personal laptops/computers in several laboratory class meetings.** Students unable to comply with this requirement should contact Dr. Ivanek at the start of the semester.

Additional resources: Veterinary Epidemiologic Research - 2nd Edition:
<http://www.upei.ca/ver/welcome>; [OpenEpi http://www.openepi.com/Menu/OE_Menu.htm](http://www.openepi.com/Menu/OE_Menu.htm)

Grading policy: For all students, grade for this course will be based on the quizzes, homework and prelims.

Quizzes: Prior to coming to the lecture/lab each week you will be expected to read pertinent text from the course textbook. The assigned reading will be tested by the quizzes with open notes. If you have done the reading the questions should pose you no difficulty. For any missed quiz, you will write a page long essay about the assigned reading; there will be no make-up quizzes except if your absence was excused (<http://courses.cornell.edu/content.php?catoid=12&navoid=2089>). A single quiz in which you got the lowest score during the semester will not be accounted in your grade.

Homework: Unless specified otherwise, assigned homework will be due a week from the day of assignment. Late homework will be marked down by 10% per day except if the delay is due to an excused absence (<http://courses.cornell.edu/content.php?catoid=12&navoid=2089>). Homework may involve writing a short essay, and/or conducting analyses using software or by hand. You will submit your homework via Canvas (or via e-mail to ri25@cornell.edu if so instructed).

Prelims: During the course students will have 2 prelims. Each prelim will involve development and recording of a Powerpoint presentation (delivered as a recorded pretend mini-lecture/presentation). You will submit your prelims via Canvas (or via e-mail to ri25@cornell.edu if so instructed). Prelim submitted late will be marked down by 10% per day except if the delay is due to an excused absence (<http://courses.cornell.edu/content.php?catoid=12&navoid=2089>).

Cheat Sheet Bonus: During the course you will be encouraged to gradually build your personal cheat sheet for epidemiology methods and concepts covered in the course. The cheat sheet should be brief, logical and easy to understand. At the end of the course fellow students and instructors will evaluate the cheat sheets. For a well-designed cheat sheet, earned score of up to a maximum of 1.5% could be added to the student's course grade as a bonus.

Grading:

- Quizzes = 20%
- Homework = 50%
- Prelims = 30%
- Optional bonus: Cheat sheet= up to +1.5%

Grading scale:

Percent	Letter	Grade Point Value
100+	A+	4.3
97-100	A	4
92-96	A-	3.7
88-91	B+	3.3
85-87	B	3
82-84	B-	2.7
79-81	C+	2.3
76-78	C	2
73-75	C-	1.7
70-72	D+	1.3
67-69	D	1
61-66	D-	0.7
0-60	F	0

IV. Tentative course schedule*:

Week	Date	Lecture/Lab/Quiz Chapter/Topic	Homework (HW) or Prelim due:
1	Aug 26	Course introduction	
2	Aug 31	Ch 1. Introduction and causal concepts	
2	Sep 2	Ch 3. Questionnaire design	
3	Sep 7	Ch 4. Measures of disease frequency	HW on Ch 1
3	Sep 9	Ch 4. Measures of disease frequency	
4	Sep 14	Ch 2. Sampling	
4	Sep 16	Ch 2. Sampling	HW on Ch 4
5	Sep 21	Ch 2. Sampling	
5	Sep 23	Ch 5. Screening and diagnostic tests	
6	Sep 28	Ch 5. Screening and diagnostic tests	HW on Ch 2
6	Sep 30	Ch 5. Screening and diagnostic tests	
7	Oct 5	Ch 2-5 Revision	
7	Oct 7	Ch 6. Measures of association	HW on Ch 5
8	Oct 12	Fall break-NO CLASS	
8	Oct 14	Ch 6. Measures of association	
9	Oct 19		Prelim 1. Mini lecture: Sampling/sample size determination, frequency measures and screening and diagnostic tests (Ch 2, 4, 5)
9	Oct 21	Ch 7. Intro to observational studies; Ch 8. Cohort studies	
10	Oct 26	Ch 9. Case-control studies; Ch 10. Hybrid study designs;	HW on Ch 6
10	Oct 28	Ch 11. Controlled studies; Ch 7-11 Revision	
11	Nov 2	Ch 12. Validity in observational studies	
11	Nov 4	Ch 12. Validity in observational studies	HW on Ch 7, 8, 9, 10, 11
12	Nov 9	Ch 13. Confounding: detection & control	
12	Nov 11	Ch 13. Confounding: detection & control	
13	Nov 16	Ch 13. Confounding: detection & control	HW on Ch 12
13	Nov 18	Ch 1-13 Revision	
14	Nov 23		Prelim 2. Mini lecture: Measures of association, and study designs Validity in observational studies (Ch 6, 7, 8, 9, 11, 12)
14	Nov 25	Thanksgiving break-NO CLASS	
15	Nov 30	Guest lectures Dr. Amelia Greiner Safi; Dr. Sarah Murphy	HW on Ch 13
15	Dec 2	Guest lectures Dr. Ece Bulut; Dr. Kevin Cummings	
16	Dec 7	Guest lecture: Dr. Christopher Henry	HW on Ch 1-13

*Subject to change to accommodate students' learning process

V. Academic Integrity

Each student in this course is expected to abide by the Cornell University Code of Academic Integrity. Any work submitted by a student in this course for academic credit will be the student's own work. You are encouraged to study together and to discuss information and concepts covered in lecture and the sections with other students. You can give "consulting" help to or receive "consulting" help from such students. However, this permissible cooperation should never involve one student having possession of a copy of all or part of work done by someone else, in the form of an e-mail, an e-mail attachment file, a diskette, or a hard copy. Should copying occur, both the student who copied work from another student and the student who gave material to be copied will both automatically receive a zero for the assignment. Penalty for violation of this Code can also be extended to include failure of the course and University disciplinary action. During examinations, you must do your own work. Talking or discussion is not permitted during the examinations, nor may you compare papers, copy from others, or collaborate in any way. Any collaborative behavior during the examinations will result in failure of the exam, and may lead to failure of the course and University disciplinary action.

VI. Accommodations for students with disabilities

In compliance with the Cornell University policy and equal access laws, I am available to discuss appropriate academic accommodations that may be required for student with disabilities. Requests for academic accommodations are to be made during the first three weeks of the semester, except for unusual circumstances, so arrangements can be made. Students are encouraged to register with Student Disability Services to verify their eligibility for appropriate accommodations.

VII. Inclusivity Statement

Population medicine and Diagnostic Sciences department is committed to providing an atmosphere for learning that respects diversity. While working together to build this community we ask all members to:

- share their unique experiences, values and beliefs
- be open to the views of others
- honor the uniqueness of their colleagues
- appreciate the opportunity that we have to learn from each other in this community
- value each other's opinions and communicate in a respectful manner
- keep confidential discussions that the community has of a personal (or professional) nature
- use this opportunity together to discuss ways in which we can create an inclusive environment in this course and across the Cornell community

I am looking forward to getting to know each of you and to working with you as we accomplish the learning outcomes in this course.
